Re: Robert O'Keefe

DOB: [REDACTED]/1937

Dear Dr. Baer:

Our firm represents the family of the decedent, Robert O'Keefe, in asbestos litigation concerning his exposure to asbestos.

Review of his treatment records indicate that biopsy attempts were unsuccessful at diagnosing his cancer and the diagnosis of small cell carcinoma of the lung was made based on history of asbestos exposure, radiological findings, and symptomology. However, for settlement purposes we need a diagnosis to a medical degree of certainty that he had lung cancer.

We would ask of you only to create and sign an affidavit that in your expert opinion. Mr. O'Keefe suffered from lung cancer which was caused as a direct result of his asbestos exposure of 49 years as a laborer. See the sample affidavit on the enclosed disk. This affidavit would be used for out-of-court, bankruptcy settlements and therefore, no court testimony is required by the examining physician.

For your convenience and review, I have enclosed copies of Mr. O'Keefe's medical records from Pekin Hospital.

Thank you. Should you have any questions, please do not hesitate to call me or Lynn Pochowicz at 1-800-783-0082.

Please send your invoice for this service to my attention at the above address.

Respectfully,

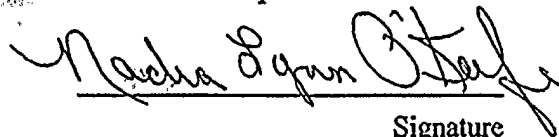

Allen D. Vaughan

Re: O'Keefe, Robert  
Social Security: [REDACTED] 3060  
Date of Birth: [REDACTED] 1937

Dear Messrs. Cascino and Vaughan,

This is a physician's report pertaining to your above-referenced client.

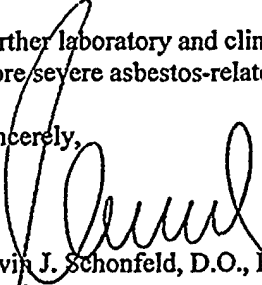

Mr. O'Keefe worked primarily as a Steel Worker/Laborer in the state of IL between the years of 1951 and 1991. He has a history of having been exposed to asbestos and asbestos dust during the above mentioned period. Mr. O'Keefe also reportedly was a smoker.

I am a physician certified by the National Institute for Occupational Safety and Health (NIOSH) as a "B" Reader and on 7/26/2006 I read your clients x-rays dated 12/29/2004. The attached report, using the standard ILO roentgenographic reporting system, indicates that your client has the following condition: Asbestosis.

In my opinion, given the history of exposure to asbestos and asbestos dust, a more than adequate latency period prior to the chest x-rays, and the well-established relationship between asbestos exposure and the roentgenographic findings, there is a causal connection between the asbestos exposure and the above mentioned condition from which he suffers. In addition, your client is at substantially increased risk for mesothelioma and lung cancer due to asbestos exposure.

Further laboratory and clinical testing may reveal that Mr. O'Keefe suffers significant disability from a more severe asbestos-related condition than indicated by the roentgenographic observations stated above.

Sincerely,

  
Alvin J. Schonfeld, D.O., F.C.C.P.

How and where do you think you were exposed to asbestos during the 1950's, 1960's and/or 1970's? (Example: We would remove pipe-wrap in the boiler room before cutting into pipes and breathe in falling particles.)

We would mix up asbestos in a wheel barrel  
to spread it on the outside of the brick  
(thermal flake) to keep the heat inside.
